Work Experience

April 2022 - May 2024 (2 year)

TheTimeStack Technology, Raipur- *Front-End Developer*

Worked as a Frontend Developer on multiple production applications, building scalable user interfaces, reusable components, and responsive web solutions. Along with frontend responsibilities, also **contributed to full-stack development** by working on backend integrations, API handling, database-connected modules, and complete feature delivery for live projects.

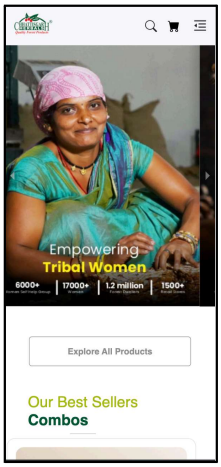
- Creating scalable and high-quality codebases
- Developing highly reusable components
- Payment gateway integration
- Inventory and Stock management system

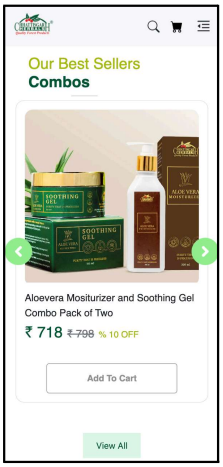
- SEO optimization
- Website hosting and domain setup

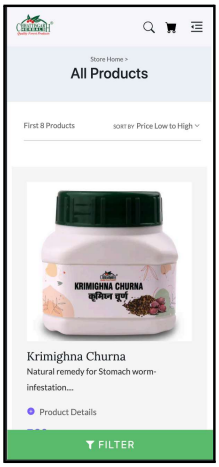
Front-End & ReactJS Learnings working in this company:

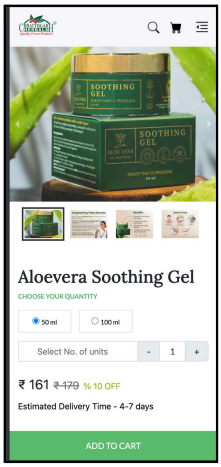
- Proficient in front-end fundamentals: HTML5, CSS3, and JavaScript.
- Experienced in ReactJS for building dynamic and efficient user interfaces.
- Skilled in state management, props handling, and lifecycle methods.
- Familiarity with Redux, React Router, and API integration.
- Strong problem-solving and optimization abilities

Chhattisgarh Herbal









Kyksrjn

Developed a seamless and user-friendly ticketing platform for **Khandelwal Yuva Kalyan Samaj Rajnandgaon**, ensuring accessibility for non-tech users.

Role: Frontend Developer

- Designed an intuitive UI for smooth user experience.
- Ensured mobile responsiveness and accessibility.
- Integrated secure authentication and seamless navigation.

Tech Stack: Next.js, Tailwind CSS, Handle Sui, Vercel.

June 2024 – Present

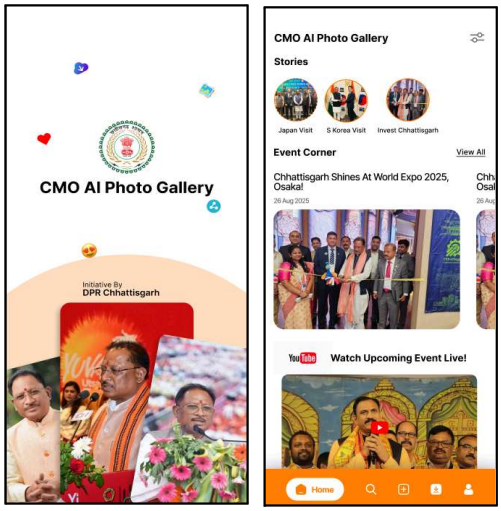
Nb Digital Technologies, Raipur- *Full Stack Developer*

Worked as a Full Stack Developer primarily on government and enterprise-level digital solutions, contributing to multiple live applications used for public services and institutional operations. Responsible for frontend development, backend integrations, API handling, and database-driven modules across production projects

Key Responsibilities:

- Developed scalable web applications for government-related project
- Built frontend modules and backend-connected features
- Integrated secure APIs and authentication systems
- Worked on production deployments and feature enhancements
- Delivered responsive and high-performance applications for real users

CMO Gallery (Hamar CM) – Government Project



Developed a government mobile application for the **Chief Minister's Office** using React Native, designed for official media management, event updates, and citizen engagement.

- Built scalable mobile application using React Native and TypeScript
- Implemented AI-powered face search for event image matching
- Integrated photo gallery, video gallery, PDF viewer, and YouTube live streaming
- Managed global state using Redux Toolkit and asynchronous workflows
- Integrated secure APIs, authentication, and local storage features

Tech Stack: React Native, TypeScript, Redux Toolkit, React Navigation, Axios, AsyncStorage, Node.js APIs, MongoDB.

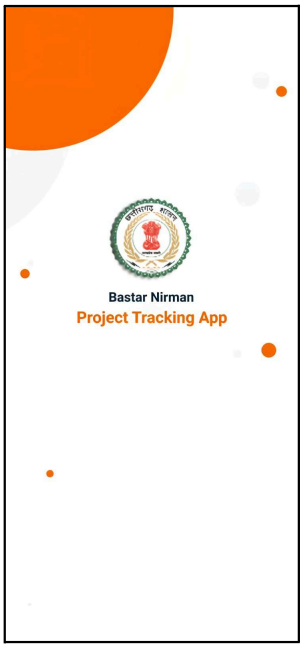
Bastar Nirman -Government Project

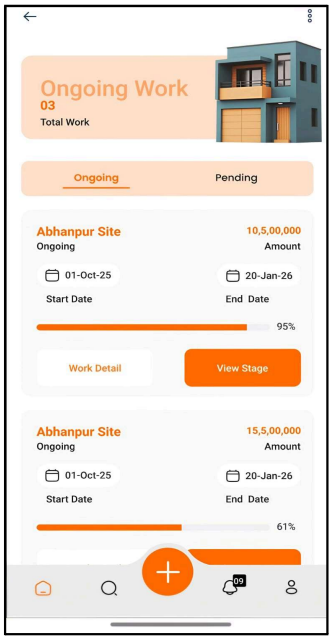
Developed a complete government infrastructure management platform covering backend services, admin panel, and mobile application for monitoring public construction projects and field operations.

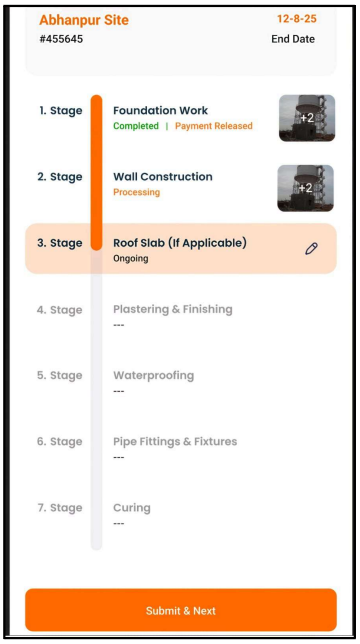
- Built backend architecture and APIs for project workflows, contractor records, attendance, reporting, and stage-based work tracking
- Developed admin panel for managing work orders, financial approvals, contractor verification, and project progress monitoring
- Built mobile application for field staff to mark attendance, upload work progress with images, and track journey routes during project execution
- Implemented geofenced attendance and location-based journey tracking for field monitoring

- Integrated hierarchical location modules for district, block, panchayat, and village-level project management

Tech Stack: Next.js, React Native, NestJS, MongoDB, Redux Toolkit, Tailwind CSS, Google Maps API







Nakoda TMT – Enterprise Admin Management System

Developed a complete admin panel for real-time dealer, sub-dealer, and order management for a commodity-based business platform, focused on pricing, order workflows, and field operations..

- Built full admin dashboard for managing dealers, sub-dealers, staff, orders, and daily pricing updates
- Implemented real-time data flow using Firebase for instant rate and order status updates
- Developed order lifecycle management with status tracking, advanced filtering, and reporting
- Integrated map-based field journey tracking with route visualization and distance calculation
- Built analytics dashboard for business insights and reporting
- Used Zod for runtime schema validation combined with TypeScript for compile-time type safety, creating a 'Type-Safe' pipeline from user input to the database.

Tech Stack: Next.js, TypeScript, Tailwind CSS, Recharts,Firebase, Firestore, Firebase Authentication
Map & Utilities: Leaflet, React Hook Form, Zod

Personal Research Project

AI Voice Automation Platform (Personal Research Project)

Researching and working on a voice-based AI automation platform inspired by Vapi for speech understanding, AI-generated voice responses, and structured order/data handling.
Research Focus: Speech-to-text pipeline, AI reasoning, voice response generation, and scalable backend architecture.

Planned Tech Stack:NestJS, Whisper, Ollama + Mistral AI, PostgreSQL, Prisma, Coqui TTS
